

Offshore Mechanics

You should have completed a recognised Mechanical Apprenticeship within an Engineering background. The role requires experience of installation, maintenance and fault finding on a range of mechanical equipment. Experience of reading mechanical/hydraulic drawings required.

Main responsibility is to carry out maintenance duties offshore as directed by the Crane Supervisor. Responsible for effectively carrying out scheduled and un-scheduled maintenance of all offshore cranes/lifting equipment with the objective of maintaining safe operations.

Previous offshore/crane maintenance experience is preferable for these posts, however consideration will be given to candidates with substantial onshore crane maintenance experience.
